

EPA Nine Elements Criteria for Watershed Plan Reviews

IDENTIFICATION OF THE CAUSES & SOURCES OF IMPAIRMENT OR THREATS TO THE WATERBODY An identification of the causes and sources or groups of similar sources that will need to be controlled to achieve the load reductions estimated in this watershed-based plan (and to achieve any other watershed goals identified in the watershed-based plan), as discussed in item (b) immediately below. Sources that need to be controlled should be identified at the significant subcategory level with estimates of the extent to which they are present in the watershed (e.g., X numbers of dairy cattle feedlots needing upgrading, including a rough estimate of the number of cattle per facility; Y acres of row crops needing improved nutrient management or sediment control; or Z linear miles of eroded streambank needing remediation).

ESTIMATE OF THE LOAD REDUCTIONS EXPECTED FROM THE PROPOSED MANAGEMENT RESOURCES An estimate of the load reductions expected for the management measures described under paragraph (c) below (recognizing the natural variability and the difficulty in precisely predicting the performance of management measures over time). Estimates should be provided at the same level as in item (a) above (e.g., the total load reduction expected for dairy cattle feedlots; row crops; or eroded streambanks).

DESCRIPTION OF THE MANAGEMENT MEASURES NEEDED TO ACHIEVE THE PROPOSED LOAD REDUCTIONS A description of the NPS* (*Non-Point Source pollution such as runoff and the leading cause of poor water quality) management measures that will need to be implemented to achieve the load reductions estimated under paragraph (b) above (as well as to achieve other watershed goals identified in this watershed-based plan), and an identification (using a map or a description) of the critical areas in which those measures will be needed to implement this plan.

ESTIMATE OF THE TECHNICAL, FINANCIAL AND REGULATORY ASSISTANCE NEEDED An estimate of the amounts of technical and financial assistance needed, associated costs, and/or the sources and authorities that will be relied upon, to implement this plan. As sources of funding, States should consider the use of their Section 319 programs, State Revolving Funds, USDA's Environmental Quality Incentives Program and Conservation Reserve Program, and other relevant Federal, State, local and private funds that may be available to assist in implementing this plan.

PUBLIC INFORMATION, EDUCATION AND PARTICIPATION An information/education component that will be used to enhance public understanding of the project and encourage their early and continued participation in selecting, designing, and implementing the NPS management measures that will be implemented.

REASONABLY EXPEDITIOUS SCHEDULE OF IMPLEMENTATION A schedule for implementing the NPS management measures identified in this plan that is reasonably expeditious.

INTERIM MEASURABLE MILESTONES FOR IMPLEMENTING THE MANAGEMENT MEASURES A description of interim, measurable milestones for determining whether NPS management measures or other control actions are being implemented.

CRITERIA TO DETERMINE WHETHER OR NOT LOAD REDUCTIONS ARE BEING ACHIEVED A set of criteria that can be used to determine whether loading reductions are being achieved over time and substantial progress is being made towards attaining water quality standards and, if not, the criteria for determining whether this watershed-based plan needs to be revised or, if a NPS TMDL has been established, whether the NPS TMDL needs to be revised.

MONITORING COMPONENT TO EVALUATE THE EFFECTIVENESS OF THE IMPLEMENTATION A monitoring component to evaluate the effectiveness of the implementation efforts over time, measured against the criteria established under item (h) immediately above.
